

Results of Clam Tenting, 2001

In 2001, 15 tents were installed south of Westview Drive, and 20 in Little Point.

Data from the last 5 at the Westview site (data was accidentally lost from the others) showed a much higher density of clams under the nets.

Three samples were taken from under each net, and three from the nearby area.

Sampling Results:

Average number of clams/ft. under nets = 545

(range: 46 to 2344 clams/ft)

Average number of clams/ft. outside nets = 11

(range: 0 to 23 clams/foot)
