

Presentation to "Seaweed Scene", Belfast Hutchinson Center, August 29, 2013.

Proposal for an Algal Industry Cluster in Maine

Willie Wilson, Ph.D.

Director

The Provasoli-Guillard National Center for
Marine Algae and Microbiota (NCMA)

*Bigelow Laboratory for
Ocean Sciences*

NCMA

National Center
for Marine Algae
and Microbiota

Est. 1981

A biological resource that drives one of the great engines of planetary control.

NCMA: A Snapshot

- The world's largest and most diverse living archive of marine microalgae.
- 35 years in the algae business.
- Started as an algal seed stock for the aquaculture industry.
- A repository for public and private collections of algae.
- 2720 strains of marine, brackish, hypersaline and freshwater algae; including cyanobacteria and macroalgae.
- 359 genera and 723 species.
- 17 products available for every strain.
- 5 growth temperatures (polar to tropical).
- On-site & off-site back-up and cryopreservation.
- Expansion to include new Bacteria and Virus collections.
- Federal, Industry and Bigelow support.

Proposal for an Algal Industry Cluster in Maine

VISION

To create a complete algal supply chain; from seed cultures to biomass infrastructure, processing, testing, and development of market opportunities; that will allow us to lay a foundation to stimulate algal economic development, and make Maine one of the top states in the U.S. to run an algal-based business. It will be a process driven by innovation, education, collaboration, and branding.

Current Steering Committee

CHAIR Willie Wilson: National Center for Marine Algae and Microbiota (NCMA)

Sebastian Belle: Maine Aquaculture Association

Mark Bloom: Bigelow Laboratory for Ocean Sciences

Nick Brown: Center for Cooperative Aquaculture Research

Dick Clime: CEI Capital for Opportunity and Change

Chris Davis: Maine Aquaculture Innovation Center

Paul Dobbins: Oceans Approved

Shep Erhart: Maine Coast Sea Vegetables

Don Gooding: Maine Center for Entrepreneurial Development

Jen Levin: Gulf of Maine Research Institute

Catherin Marin: Maine Technology Institute (MTI)

Sarah Redmond: Maine Sea Grant

George Seaver: Ocean Organics

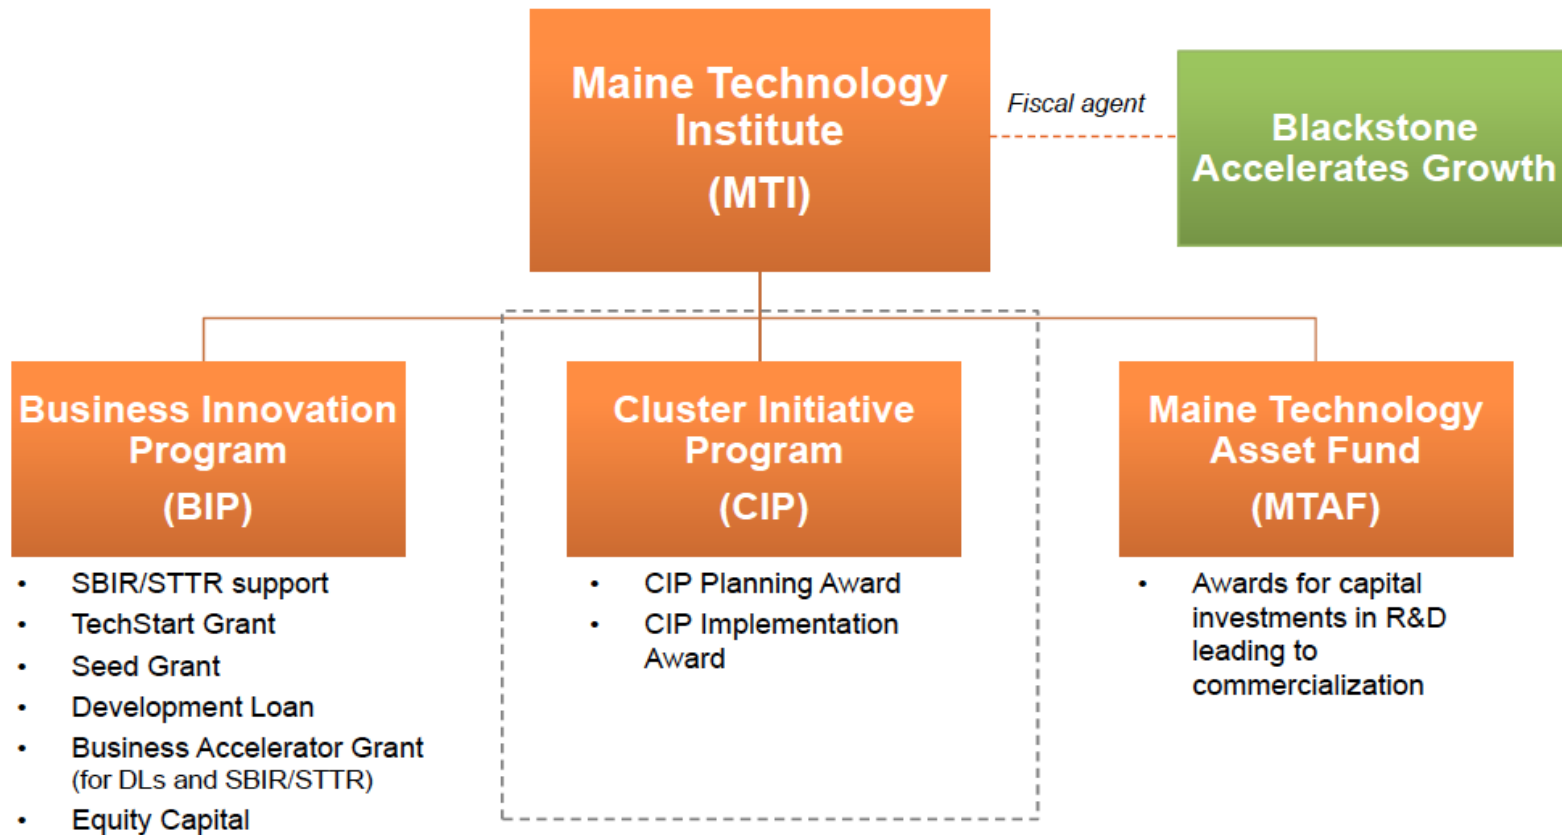

Liz Solet: Maine Seaweed Institute

Sara Yentsch: NCMA

Overview of MTI

 Focus of this presentation

www.mainetechnology.org

Why a Cluster Initiative Program?

- ❑ Maine needs more than individually successful technology companies to have a competitive economy.
- ❑ Companies benefit from being linked to similar companies, near specialized workforce, and surrounded by industry/research resources that can help them thrive.
- ❑ Technology clusters are an important driver of business growth and economic development, leading to the creation and retention of good jobs.

What Exactly is a Cluster?

The term “Technology Cluster” is an organizing principle

Clusters have the following elements:

- **concentrations of companies** that typically serve related markets or a targeted need, and draw on similar knowledge and employee/workforce skills to develop innovative products and Services
- **supported by common organizations**: universities, trade associations, legal/financial services and government agencies
- **Relationships and the sharing of knowledge and skills** among such industry group are the key to being a cluster, rather than simply industry concentration

These elements lead to a **collective competitive advantage**

Four Cluster Elements

From Charlie Colgan's presentation: "Tracking Cluster Evolution in Maine"

Timescale

- Planning proposal: Sept/Oct 2013
 - \$50k – strategy development
- Implementation Proposal. March 2014
 - \$500k – build industry cluster.
